A pneumatic machine can be thought of as a large flexible mechanical structure that is moved by some sort of control system. The control system takes its input from a human operator and translates this command into the motion of actuators, which move the mechanical structure.

This project is a study about the designing of pneumatic hole punching machine, which shows the capability to design a concept using variety of components.

### **Design of Automatic Pneumatic Hole Punching Machine**

So here we propose a pneumatic powered punching machine that allows for this with ease. We propose to develop a compact pneumatic punching machine with enough torque to demonstrate hole punching through thin metal sheets. The purpose of this project is to study the punching mechanism and implement it with the help of pneumatic power. For this purpose we first construct a frame to withstand and ...
